# BOX CLEVER

**INSECT BAR  
& MONITOR.**

**YOUR LOGO HERE.**

**SECURING BAR  
FOR BAIT.**

**PLASTIC SPIKES.**

**KEY MECHANISM.**

The Romax mouse box is the first box to have the option of an integrated insect monitor inside. This offers many benefits including: Save cost and labour compared to buying separate mouse and insect monitor units: easier to introduce to existing contracts (or remove) as and when required; a barrier to help prevent grain baits themselves becoming a potential food source for pest insects; stylish and convenient; designed to allow capture of the smallest insects right up to oriental cockroaches.

The box can be personalised for free\* and unlike most other boxes, we actually emboss your designs into the plastic of the lid. This not only makes the box look more professional (it looks like 'yours' rather than simply overprinted). It won't rub off over time (\*subject to one-off plate charge).

We've added a bait bar for optional security. Whilst most blocks will be held within the box at the start, as they get eaten and reduce in size, they can fall out if the box is picked up. By placing the bait on the bar it will greatly enhance its safe retention.

As well as block security, we've thought of sachet and paste safety. Plastic 'spikes' in the floor and roof of the box gently grip sachets to reduce the risk of them falling or being dragged out.

Meanwhile 3 prongs on the box floor have been designed to allow caulkable paste baits to be applied. This greatly reduces the problem of them forming dry 'balls' and falling out as they age.

The lock has been designed to be extremely robust and difficult to open without a key. In tests against many of the leading boxes, the Romax mouse box security came up very favourably. In addition, the box has been designed with a single key - not only will the one key open all the Romax range but we've designed the lock so that it will also open by the use of some of the 'universal' keys on the market.

The design is extremely stylish, durable and practical. Moulded in a high-density Polyethylene for additional strength, the unit not only offers cost savings in terms of insect monitoring and personalisation, it has been deliberately priced extremely competitively.

We've also opted for a user-friendly pack size of 24 units so service personnel can carry smaller quantities if they wish, rather than having to carry an outer of 100.

**Multiple Colours Available**  
Please ask for specialist colours.
