PEST, ENVIRONMENTAL & AGRICULTURAL SOLUTIONS

Trusted manufacturer & supplier of
innovative & sustainable solutions.

HOW CAN WE HELP YOU?

Barrettine Environmental Health is the trusted manufacturer and global supplier of innovative and sustainable pest control solutions. Based in Bristol, UK, Barrettine Environmental Health innovate and manufacture integrated pest management solutions to control insect and rodent pests, supplying these throughout sectors such as Professional Pest Management, Waste Management Agriculture and Vector Control. As a division of the Barrettine Group, this affiliated network enhances our capabilities and access to a wealth of collective knowledge and experience in quality manufacturing processes.

Barrettine Environmental Health offers an extensive selection of insecticides designed for controlling flying and crawling insects and a portfolio of monitoring solutions that encompass insect pheromones. The Barrettine product range includes rodent control products that feature patented twin-active rodenticides and rodent proofing solutions as well as novel insecticide free control formulations. Furthermore, we specialise in innovative solutions tailored for the agricultural sector, specifically in crop and grain protection.

These product solutions are dedicated to safeguard the public health, integrity and the quality of commodities in these sectors. Our extensive expertise is complemented by a highly professional service committed to supporting customers.

PEST CONTROL CATALOGUE 2024/2025

Products marked up as “Professional” can only be used by professional users holding certification demonstrating compliance with UK rodenticide stewardship regime requirements. Read the label before use. Using these products in a manner that is inconsistent with the label may be an offence. Refer to the CRRU UK Code of Best Practice (or equivalent) for guidance. When this product is supplied to a user for the control of rodents, it shall only be supplied to a professional user holding certification demonstrating compliance with UK rodenticide stewardship regime requirements”.

BROMADIOLONE & DIFENACOU

A combined active demonstrating excellent efficacy against rats and mice. Block and pasta formulation contain FLUO-NP, UV tracking technology.

PROFESSIONAL

ROMAX® MUSKIL® BLOCK

FLUO-NP®
UV TRACKING TECHNOLOGY

Contains 0.0025 % Difenacoum & 0.0025 % Bromadiolone. For use against rats & mice, in and around buildings. A 25 g wax block manufactured from high-quality food-grade ingredients with a predrilled hole to facilitate easy securing in bait stations. Romax® Muskil® Fluo NP® is formulated with unique Fluorescent No Phobia technology which significantly improves the primary acceptance of the bait resulting in faster kill whilst also allowing for tracking. Permanent baiting approved. Safety - Contains denatonium benzoate

Approval No: GB-2013-0757

1 x 7 Kg

ORDER CODE: BMUSBB7K

ROMAX® MUSKIL® WAX BLOCK – Proven palatability.

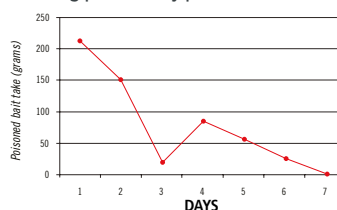

RATS

Poisoning phase: daily poisoned bait-take (grams)

MICE

Poisoning phase: daily poisoned bait-take (grams)

An extruded wax block produced with a central hole for anchoring into bait stations with edges to encourage gnawing. The block which has the unique Romax® Muskil® formulation, makes it highly attractive to both rats and mice while remaining durable in challenging conditions of high humidity and moisture.

PROFESSIONAL

ROMAX® MUSKIL® PASTA

FLUO-NP®
UV TRACKING TECHNOLOGY

Contains 0.0025 % Difenacoum & 0.0025 % Bromadiolone. For use against rats & mice, indoors and outdoors. A 15 g sachet containing pasta manufactured from high-quality food-grade ingredients that can be secured in bait stations. Romax® Muskil® Fluo NP® is formulated with unique Fluorescent No Phobia technology which significantly improves the primary acceptance of the bait resulting in faster kill whilst also allowing for tracking. Permanent baiting approved. Safety - Contains denatonium benzoate

Approval No: GB-2013-0756

1 x 4 Kg

ORDER CODE: BMUSPA4K

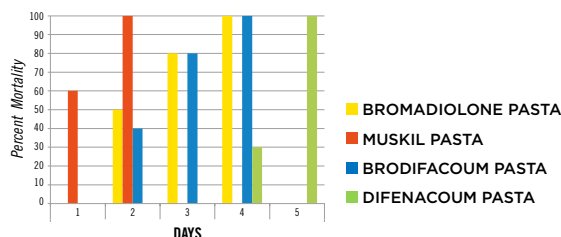

ROMAX® MUSKIL® PASTA – The fastest solution.

Laboratory tests show speed of kill compared with other actives.

RATS

MICE

Field tests and commercial usage in Europe has proven that Romax® Muskil® pasta is the fastest solution for controlling both rats and mice. The bait is packed in single dose filter bags which preserves the attracting characteristics effectively maintaining the palatability and performance in a wide range of environments.

BRODIFACOUM

PROFESSIONAL

ROMAX® VENOM WHEAT

The Romax® Venom active ingredient is infused within the core of the seed, giving a product and active, that when consumed is particularly potent to rodents. Approved for use 'in and around buildings' for rats and mice.

Approval No: GB-2015-0881-004

1 x 4 Kg

ORDER CODE: BVWBRD4K

1 x 10 Kg

ORDER CODE: BVWBRD10

ROMAX® VENOM WHEAT

RODENTICIDES - BRODIFACOUM

ROMAX® VENOM WHEAT is a ready-to-use bait for the control of house mice and brown rats at all development stages containing a highly potent compound: brodifacoum, a single-feed, second-generation anticoagulant active ingredient. Thanks to its mode of action, rodents' death occurs without rousing suspicion towards the bait by the other members of the colony.

ROMAX® VENOM WHEAT is a rodenticide bait consisting of decorticated wheat, manufactured with SAT (Special Absorption Technology) technology, allowing the homogeneous distribution of the active ingredient both inside and on the surface of the grain. This bait is ideal for treatments when rodents' diet is mainly based on grains/corn seeds consumption, such as in rural and zoo-technical buildings, and particular civil and industrial areas (feed production, flour processing, mills, etc.). The product contains a well-balanced mix of food-origin components attractive for the rodents' species previously mentioned and incorporates a bittering agent (Denatonium Benzoate) to help prevent human consumption.

KEY BENEFITS:

- Ready-to-use rodenticide grain bait.
- Brodifacoum is a single feed, synthetic, second-generation anti-coagulant rodenticide.
- When compared to other anticoagulant rodenticides, brodifacoum has an excellent level of activity against the brown rat, and against mice.
- This is an aggressive single feed poison.
- potent poison to all mammal species and it is essential that all baits are only used indoors, and they must be well protected from non-target animals. The best way to achieve this is by placing the baits in an approved bait box.

CHOLECALCIFEROL

Cholecalciferol has no known resistance making it a good choice if resistance is suspected.

RODENT control

PRODUCTS

PROFESSIONAL

HARMONIX RODENT PASTE

Harmonix® Rodent Paste is a high-performance ready-to-use non-anticoagulant rodenticide bait containing Cholecalciferol 0.077 % w/w (0.075 % w/w pure) for the control of rats and mice for the protection of public health, stored products and materials.

Harmonix® Rodent Paste is an incredibly flexible product that provides the professional pest controller treatment options in a wide number of scenarios. Harmonix® Rodent Paste is not limited to 'in and around buildings', and the active ingredient Cholecalciferol has no known resistance making it a good choice if resistance is suspected.

Approval No: GB-2020-1266; IE/BPA 70695

PRODUCTS

PROFESSIONAL

RACUMIN FOAM

IR

Contains 0.4 % (w/w) Coumatetralyl. Racumin® Foam is a new, non-bait rodenticide from Bayer, offering an alternative method to control rat and mice infestations. This truly innovative foam formulation works with the rodent's natural grooming habits and is effective as a result. When faced with difficult to access areas, Racumin® Foam is for indoor use and can be applied in known rat runways, passages, entrance points / holes, covered tracks and wall cavities.

Approval No: GB-2014-0860

Supplied with free contact station, pictured below.

FREE ROMAX® CONTACT STATION

1 x 500 ml

ORDER CODE: BRACFO.5

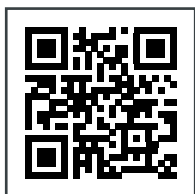

ROMAX CONTACT STATION

Allows contact rodenticides to be applied within the station to allow rodents to come into contact with the active ingredients. Following the rodent control program, the contact stations can be conveniently removed. The unique design incorporates end flaps on either side of the station that has the effect of increasing the transfer area of the active ingredient to the coat of the rodent as the rodent passes through the station.

ROMAX® SNAP-R RAT TRAP

The Romax® Snap-R Rat Trap is highly effective at trapping rats. Detachable tag allows traps to be secured if required.

Each

ORDER CODE: BSNAPRTR

ROMAX® SNAP-R MOUSE TRAP

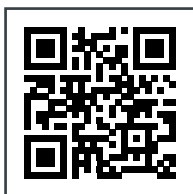

The Romax® Snap-R mouse trap combines an effective mousetrap mechanism with rugged materials, the Snap-R is simple, durable and effective. Please note colour of strike bar may vary.

Each

ORDER CODE: BSNAPMTR

RODENT DETERRENT & LURES

ROMAX[®] RODENT FEED

Contains a highly effective seed substance formulation in a convenient 55 ml syringe container to load both live and lethal traps. This paste formulation allows easy application and effective grab onto the trap's trigger plate to enhance catch rate. Ideal for use in food premises as this product does not contain nuts. To be used by professionals who have gel style syringe gun applicators.

Each

ORDER CODE: BRODFEED

ANTI-RODENT LACQUER

Quick-dry formulation for surface treatment to deter rodent pests from chewing or biting treated areas. Anti Rodent Lacquer contains a quick-dry formulation that forms a water-resistant protective film over the treated surface. Simply spray on the area under attack by rats or mice - rodents will be deterred from chewing or biting into the treated area. Contains a bittering agent and natural plant oils. Ideal for use in and around domestic and commercial properties, as well as on farms and other agricultural premises.

- Provides up to 6 months protection to treated areas.
- Indoor and outdoor use.
- Suitable for application to hard surfaces, including electric cabling and insulation.
- Contains peppermint oil, castor oil and bittering agent.

1 x 600 ml

ORDER CODE: BRODLACQ

TRAPPING GUIDELINES FOR RODENTS

Whilst the use of traps is labour intensive, they have a part to play in rodent control, particularly for controlling very small infestations in circumstances where the use of rodenticides is unacceptable. They are unlikely to contribute significantly to large scale control programmes. The major reason for their limited applicability is the behaviour known as neophobia. If large scale control using traps is essential, then the trapping programme needs to be very intensive and very closely monitored.

The use of break-back traps for both rats and mice is probably the most widespread and successful trapping technique. Careful placement is required with break-back traps, the treadle end of the trap being placed across the rodent run against a vertical surface to minimise avoidance. Bait does not need to be used and may reduce the effectiveness of the trap.

All traps should be visited at least once every 24 hours to remove any dead rodents, reset the traps, and ensure that no rodents are being held alive.

One further form of trapping is the use of 'Glue-boards'. These are sheets of material, such as hardboard or plastic, on which a specially designed sticky substance or 'rodent glue' is spread. The boards are placed in strategic areas of rodent activity in the event that rodents will become stuck on the boards and can then be humanely killed and removed.

Rodent boards should only be regarded as a 'last choice' option.

The new 'Alliance' Code of Practice on the responsible use of this technique can be found in the glue board section.

For more information visit: <https://www.pmalliance.org.uk/download/humane-use-of-rodent-glue-boards/>

SPRING TRAPS GENERAL USE

The law requires that spring traps must be set in natural or artificial tunnels, to reduce the risk of killing non-target species. Natural tunnels such as burrows roots may be used, or artificial tunnels, about 60 cm long, can be made from turf, rocks, pipes, boards or fallen timber. This tunnel must be large enough to allow the trap's arms to swing and close, but the tunnel entrance should be reduced to a width of suitable size for the target species by driving sticks into the ground, to exclude pets and other wild mammals and birds. Squirrels will investigate such tunnels and catches may be made throughout the year, particularly in winter and spring. Baiting is unnecessary but will improve catches.

Traps should be placed with the trigger in the middle of the tunnel and should be bedded in flush with the floor. They should be inspected daily and sprung once a week to prevent seizing due to rust. All traps should be securely anchored.

The Spring Trap Pests Act 1954 makes it an offence to use a spring trap for the purposes of killing or taking animals in England and Wales other than one approved by an Order of the Secretary of State. The approval of traps is a devolved issue.

Traps that are currently approved in England are specified in the latest version of The Spring Traps Approval Order 1995. Only traps that have been approved for the purpose may be used.

Those commonly available from Barretine are the Fenn MK4 & MK6, BMI Body Grip, WCS Tube Trap, Mole Trap, Talpex, Talpirid and Putange may also be used if available. Spring traps should not be used in areas where protected species such as red squirrels or polecats may be present.

MOLE & SQUIRREL TRAPS

RODENT
control
PRODUCTS

MOLE TRAP HALF BARREL (DUFFUS)

A very popular trap for moles with good effectiveness in burrows.

Each

ORDER CODE: BTRMOLBA

TALPEX® MOLE TRAP

Arguably the best mole trap on the market. Similar to the scissor and pincer traps but more robust. Steve Caple producer of the "Trapping Techniques" video confirmed the following; "Since switching to the Talpex trap my catch rate compared to the more commonly used traps has increased by at least 50 %".

Each

ORDER CODE: BTRMOTAL

FENN TRAP MARK 4

FENN TRAP MARK 4

For squirrel, rat or stoat. The trap is to be set in runs or burrows. A artificial surround or tunnel should be created around the trap to protect non-target species.

Mark 4 - Each

WIRE WOOL

Ideal for restricting access to mice around small holes and gaps such as around pipes.

1 x 450 g

ORDER CODE: BWIRWOOL

ROMAX® RODENT SEAL

Romax® Rodent Seal uses a top-quality industrial sealant in a patented mix of stainless steel fibres. The benefits of such 'wire wool' plus proofing materials have long been known, but they've been combined to offer a professional and time-saving solution to exclusion for the first time. In addition, the product has been commercially tested and is 'metal-detectable', making it a good choice for sealing around plant and machinery in the food industry, whether this be for rodents, insects or just housekeeping. Standard outer 25

1 x 310 ml

ORDER CODE: BRORODSE

ROTATING ADJUSTABLE NOZZLE

1 x 5

ORDER CODE: BRORONoz

ROMAX[®] RODENT SEAL

SEALING THE ENTRY POINTS

is an essential and cost-effective prevention solution.

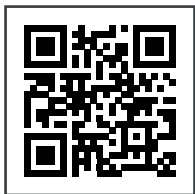

Key Benefits:

- Contains metal fibre technology encapsulated within a silicone body to prevent erosion of the wire fibres.
- Prevents access to rodents: seals gaps, cracks and openings of many sizes.
- It doesn't have to be re-applied every year.
- Maintains its physical and chemical characteristics once applied.
- Cures on exposure to moisture vapour to form an elastic silicone rubber.
- Can be use indoors and outdoors, around buildings.
- Fire/heat resistant.

RODENT GLUE BOARDS

ROMAX® RAT GLUE BOARD

Barrettine has long campaigned that glue boards should be available to professional users only, and to encourage responsible use of these valuable last resort tools, we have launched a new 'professional only' Romax® glue board – As well as a modern design, the product has the added benefit of the code of conduct and guidelines printed inside- along with their professional only recommendation. For efficacy & humaneness, it's also made to the highest specification to minimise the risk of escape. Each board is wrapped individually.

Standard Boards (23 cm x 19 cm)

Large Boards (33 cm x 21 cm)

Please note the use of glue boards is prohibited in Wales.

1 x 48 - Rat

ORDER CODE: BRMXGBOA

ROMAX® MOUSE GLUE BOARD

Barrettine has long campaigned that glue boards should be available to professional users only, and to encourage responsible use of these valuable last resort tools, we have launched a new 'professional only' Romax® glue board – As well as a modern design, the product has the added benefit of the code of conduct and guidelines printed inside- along with their professional only recommendation. For efficacy & humaneness, it's also made to the highest specification to minimise the risk of escape. Each board is wrapped individually.

PEST MANAGEMENT ALLIANCE HUMANE USE OF RODENT GLUE BOARDS

Pest Management Alliance - Code of Best Practice - Humane Use of Rodent Glue Boards

In order to protect public health within high-risk environments, the use of rodent glue boards remains an important route if all other options are considered inappropriate. Although rodent glue boards are not designed to physically harm rodents, their use raises valid concerns and they should only be sold to or used by technicians who have been given adequate training and are competent in the effective and humane use of this technique. The following principles must be followed in order to minimise animal welfare concerns:

All interventions aimed at the removal of rodents, including the use of rodent glue boards, have the potential to harm non-target animals and the environment. Although following best practice can mitigate these risks, they cannot be entirely avoided. Therefore, the principal strategy when choosing methods for the control of rodents is to employ the method or methods that have the least potential for adverse impact (i.e. are the least severe and least likely to catch non target animals) but which will be effective in the prevailing circumstances. This is the concept of "risk hierarchy". For more information see the CRRU Code of Best Practice via www.thinkwildlife.org

The definition of a rodent glue board is "any adhesive coated surface used to catch rodents"

1. Consider the risk hierarchy

All other options for rodent control must be carefully considered before rodent glue boards are used. Detailed records must show why other control methods are either considered inappropriate or have failed. Where there is a rodent in a high risk environment, it may be appropriate for rodent glue boards to be placed strategically to ensure immediate control. Use of rodent glue boards should be based on individual risk assessment, but their use should be reviewed every 24 hours.

2. Trained and competent user

Those selecting the use of or using rodent glue boards for rodent control should be trained and competent in their use. This normally means a relevant certification/qualification and familiarity with the Code of Best Practice for their use.

3. Check rodent glue boards frequently

Where rodent glue boards are used these must be inspected at appropriate intervals. This should be within 12 hours of placing, or at least as soon as is reasonably practicable, including weekends and bank holidays. The pest controller may train one or more on-site personnel to check the rodent glue boards at more frequent intervals in order to minimise the rodents' time spent on traps and/or free non-target species, but it remains the responsibility of the pest controller (under the Animal Welfare Act 2006) to deal with any animals trapped on the rodent glue boards, and to revisit at a minimum of every 12 hours.

If unavoidable events cause slight extensions to inspection intervals then the reasons should be recorded. Longer delays must be avoided (see contingency plan below). Where possible and practical, inspection times must be organised to minimise the time rodents are likely to be on the rodent glue board (e.g. if rodents are known to be active during certain periods, inspection times should be arranged with this in mind). The Animal Welfare Act 2006 requires that caught animals must not display any signs of undue suffering, therefore inspections times should be as frequent as necessary to mitigate against this. Records must be updated after all inspections

4. Have a contingency plan

A contingency plan must be in place so that in the event of an emergency a second competent person can be called upon to inspect the rodent glue boards and deal with any captures or safely remove the rodent glue boards as appropriate. Where it is known rodent glue boards will not be inspected at appropriate intervals they must be taken up (even if only temporarily).

5. Use the correct size rodent glue board for the pest species

The size of rodent glue board must be appropriate for the target species.

6. Detailed records

Detailed copies of records and location plans should be available on site at all times for all rodent glue boards laid during any treatment and must be updated as necessary to ensure traceability. Copies ensure information is available should site records be lost or unavailable.

7. Dispatch of trapped rodents humanely

Rodents trapped on rodent glue boards must be dispatched quickly and humanely by technicians with appropriate training in methods of dispatch. Drowning is not an acceptable method of dispatch.

8. Protect non-target animals

Rodent glue boards must be placed in such a manner that they do not present a risk to non-target species. In the event that a non-target animal is trapped, a freeing agent (a suitable food grade oil or similar emollient) should be applied to the animal for removal. If the trapped animal is injured in such a way that release would result in unnecessary suffering, it should be killed humanely. Non-targets should only be released at their site of capture, not elsewhere, and only if they appear to be physically unharmed and their release is not prohibited by law. Ensure when using rodent glue boards that a suitable emollient is available to hand.

9. Remove rodent glue boards at the end of treatment

At the end of treatment all rodent glue boards must be accounted for, removed by the technician and the records endorsed accordingly.

10. Dispose of rodent glue boards safely

Rodent glue boards should be disposed of with care. The sticky surface must be covered to avoid the accidental trapping of any species or subsequent misuse, and the rodent glue board should be disposed of safely and discretely in accordance with legal waste requirements.

11. Communication with the customer

This Code of Best Practice must be provided to the customer to make them aware of the standards to which the operative is working.

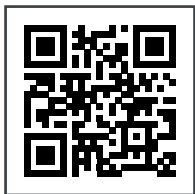

The humane use of rodent glue boards is the legal responsibility of the pest controller, and cannot be delegated to untrained people. All technicians must be suitably trained and competent in their application, maintenance and ultimate disposal including the dispatch of the target species and safe removal of non-target species.

This Code of Best Practice was produced after consultation with Defra, APHA, and Natural England.

The Pest Management Alliance consists of the British Pest Control Association, the Chartered Institute of Environmental Health, and the National Pest Technicians Association.

FLYMAX® ULV

Flymax® ULV provides rapid insect knockdown against flies, moths and crawling insects. Flymax® ULV is a ready-to-use cellulose formulation combined within a water-solvent based delivery system. An ideal flying and crawling insect adulticide against insecticide resistant insect strains having the added benefit of being insecticide free with no residual activity and no maximum treatment frequency. Flymax® ULV is for professional use in lofts, homes, agricultural buildings in and around domestic properties, public and municipal areas, refuse tips, poultry houses, slaughterhouses and manure heaps.

1 x 1 Lire

ORDER CODE: BFLYMAXU

MITEMAX®

MiteMax® is highly effective against poultry red mite (*Dermanyssus gallinae*). MiteMax® is a patented formulation that has been optimised to penetrate the dusty layers typically found within hen houses and grain stores to spread deep into the cracks and crevices that harbour mites.

MiteMax® contains an advanced food-grade cellulose polymer that acts on-contact with the mite. Mitemax® functions as a sticky trap rendering mites irreversibly immobile providing rapid knockdown. MiteMax® has a physical mode of action by trapping and the death/ killing effect is the consequence of this, which means it both falls outside the scope of the biocide directive (exempted from EU Reg. 528/2013) and also is effective against mites resistant to chemical insecticides.

6 x 500 ml

ORDER CODE: BMITE500M

MoBe[®] ant GEL BAIT

Dosage rates per 35g tube

Over 100
Applications
from a
35g Tube

- Neutralises the source of infestation
- Approved for use against tropical ants
- Effective against larvae due to feeding behaviour

Highly Attractive Bait Matrix

MoBe Ant gel is an effective method of controlling both native and tropical species of ants both indoors and around buildings. The gel bait is composed of highly desirable sugars designed to exploit the social behaviour of the insects and eradicate the nest.

MoBe Ant gel is effective against all life stages and colony members, most importantly the queen. The gel can be applied directly along foraging trails or in a feeding station to encourage uptake.

MoBe[®] roach

GEL BAIT

- Quick and precise delivery

- Knock-on effect for fast control

- More effective on adult cockroaches than Fipronil*

Highly Attractive Bait Matrix

MoBe Roach Gel is effective against all life stages of both German and Oriental Cockroaches and suitable to be applied directly to their harborage areas, minimizing risk of exposure to non-target species and humans.

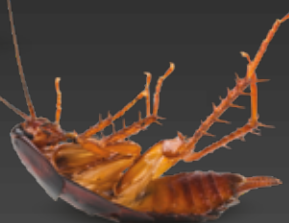

Effective control is achieved through exploiting the natural habits of the cockroach, allowing the active to transfer between individuals inhabiting the same area – even if they do not directly ingest the bait.

**Imidacloprid shown to provide more effective control of adult cockroaches than fipronil in field studies (91.17% - Imidacloprid vs 59.33% - Fipronil)*

(Abdullah, N. and Majid, A., 2022)

- Safe to use indoors
- Quick and easy to apply
- Effective on Adults & Nymphs

MoBe® MOAT

MoBe® Moat has been designed and successfully used by professional pest controllers in conjunction with some of the industries leading food manufacturers.

The MoBe® Moat consists of 18 metres of siliconised paper with adhesive applied to one surface and has been manufactured as an aid to trapping insects around problem, high risk areas. The strip is wide enough to act as a barrier to help prevent insects from crossing over. The paper comes with pre-printed hazard warning lines so to warn others of the tape as well as usage instructions. The tape can be cut to the desired length giving a great number of potential applications. If trapping/monitoring insect pests, additional lures can be added along the tape's length.

Primarily the MoBe® Moat has been designed as a 'quarantine' barrier working in two ways:

- To stop potential movement by pests into previously infestation-free areas/products
- To cordon off known infested areas or products to prevent the spread of an infestation.

Some of the many potential applications:

- 1) To quarantine contaminated pallets of product and prevent cross-contamination to other stock, e.g. peanuts, rice, pet food.
- 2) To act as a barrier to known clean products, e.g. post fumigation commodities or finished product awaiting dispatch.
- 3) Using tape to glue the underside, MoBe® Moat can be stuck to the inside of silos to prevent migration of grain pests.
- 4) Act as a single large overnight trap in sensitive infested areas, e.g. around the perimeter of commercial kitchens against cockroaches.

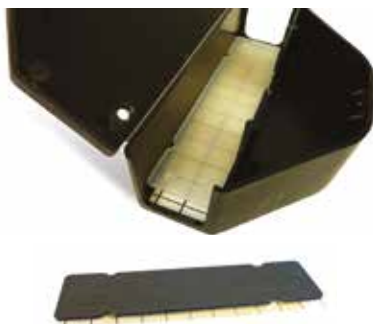

Please be aware the start of the roll contains no glue.
Standard outer 15

Please note that whilst the glue has been designed and tested successfully against insects, as with other similar devices, we cannot guarantee that it will successfully retain all pests under all environments and conditions.
The MoBe® Moat is sold as a professional only product.

MoBe® ROACH TRAP

The MoBe roach trap is an effective, low profile, monitoring trap that can be placed under shelving and into restricted spaces which can be used before, during, and after treatment of cockroach infestations to locate problem areas of harbourage, allowing pest controllers to focus their efforts in specific areas. The MoBe roach traps have a high capacity to detect low-level populations and can also be used in a wide variety of environments, including the food industry, as part of an integrated pest management programme. The traps are a safe and non-toxic way to identify cockroaches of all species.

Benefits:

- Ready to use
- Glue board with integrated attractant lure
- Non-toxic monitoring
- Low profile for effective placement

1 x 10

ORDER CODE: BMOBECRT

MoBe[®] Moat

A Multi-purpose Adhesive Barrier

For temporary quarantine, pest monitoring and product protection.

Protects against
Crawling Insects

KEY FEATURES:

- \\ Isolate suspected and infested products.
- \\ Ideal for use as a temporary monitor trap & entry barrier.
- \\ Chemical free protection for food storage, production & handling materials.
- \\ Special non-dry glue technology - stays sticky for long periods.
- \\ 18 metres on every roll - special siliconised paper.
- \\ Easy to tape down for greater security.

● Attach food or pheromone lures to attract target pests.

● MoBe Moat can be cut to fit any situation.

WASP TRAPS & BAIT

INSECT
control
PRODUCTS

TRAPPIT WASP BAG

Effective, safe and easy to use. Each trap has a generic print, with instructions for use in six languages. For the wasp bag, use 500 ml of ready to use wasp bait (sold separately, see below) and hang. Once the trap is full of dead insects, close the screw cap and dispose of in household waste.

Standard outer 25

Each

ORDER CODE: BTRWASPB

TRAPPIT LIQUID WASP BAIT

Just add water: a single trap can catch and kill up to 20,000 flies. For outdoor use, ideal for farms, stables, gardens and around bins and refuse areas. Clean and easy disposal.

Standard outer 2

1 x 5 Litre

ORDER CODE: BTRDWFL5

VESPULURE WASP BAIT

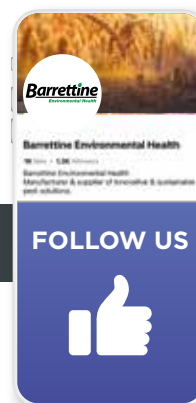

A highly effective monitoring liquid to be placed within wasp monitoring traps to monitor the presence of wasps and hornets, including Asian hornets (*Vespa velutina*). The use of the Vespulure monitoring liquid can draw wasps away from areas and can also be used as an effective feeding station to identify the location of wasp and hornet nests for areas that subsequently need to be cleared of these stinging insects.

The monitoring liquid is formulated with carbohydrates and volatile solvents that assist in expanding of the monitoring area. The formulation contains a bee repellent.

1 x 5 Litre

AMENITY MOTH LURES

The Pine Processionary (*Thaumetopoea pityocampa*) is a moth of the family *Thaumetopoeidae*. It is an abundant species of pine woods in central and southern Europe, and as such, has been an important economic pest to Forestry. This is increasing concern, especially in more urban areas due to both the severely irritating hairs that protect the caterpillar larvae. The Oak Processionary Moth is an invasive pest relatively new to England, being found in London in 2006. The Oak processionary Moth is a serious health risk to humans and animals, predominantly from the urticating hairs that cause allergic responses and necrosis on the tongues of dogs that come into direct contact with the caterpillars.

Lures and traps are available to monitor Pine and Oak Processionary Moths in high risk areas. In addition, a number of treatment options are available for both Processionary and Brown Tail Moths, contact the office for more information.

1 x 5 Litre

ORDER CODE: BPY33005

X-LARV

X-LARV is an innovative product for the treatment of stagnant and still waters to control mosquito larvae. X-LARV acts by physical-mechanical action ensuring efficacy up to 4 weeks and for use in still and stagnant water such as sewers, drains, manholes, saucers, buckets, tires, gutters, water tanks and septic tanks, etc.

X-LARV is a liquid ready to use which, when applied to the surface of the water, quickly creates a thin film that prevents the development of immature stages of mosquitoes (larvae and pupae).

1 x 1 Litre

ORDER CODE: BXLARVIL

CROP PROTECT[®] 25EC

A VERSATILE GRAIN PROTECTANT

Prevents contamination from insects and retains the quality of stored grains.

MAPP 20530

- ✓ Pre-harvest treatment of the building fabric
- ✓ No with-holding period
- ✓ Admixture ✓ Pyrethroid formulation

CropProtect[®] 25EC is designed to be applied to the interior of grain storage facilities to eliminate any pests remaining from previous issues or applied directly to the grain post harvesting to ensure long-lasting defence against infestation. This concentrated product is capable of treating 50m² with just 20-30 ml (diluted in 5 litres of water) and providing you with long lasting protection. CropProtect[®] 25EC may also be applied directly to grain as an admixture.

Thanks to its synergised formulation of deltamethrin and piperonyl butoxide, CropProtect[®] 25EC can eliminate and deter common grain pests such as grain weevils, saw toothed grain beetles, flour beetles and grain borers. Additionally, flying pests such as warehouse and grain moths are effectively controlled.

PEST CONTROL CATALOGUE 2024/2025

BIRD REPELLENTS & GUANO CLEANING

ORNAWAY® BIRD REPELLENT

Ornaaway® Bird Gel is a novel, highly effective yet discrete bird deterrent for use on buildings and other structures.

The convenience of Ornaaway in pre-filled dishes allows a significant time-saving aspect to the bird installation. The formulation utilises high electromagnetic reflectance spectrums that birds avoid. To be used within an integrated approach to manage birds that could include housekeeping/ cleaning, trapping, spikes and netting. Once properly installed, the product remains effective for at least two years, even in harsh climates.

The gel is intended to be applied in the UV stabilised, low-profile dishes that are supplied with the product. Once installed, the dishes are usually invisible from ground level, so do not detract from buildings' visual appearance.

Ornaaway® Bird Gel is also offered in pre-filled dishes as pictured below. The 300 g Caulking Tube includes 15 dishes for filling.

ORDER CODE	DESCRIPTION	PACK SIZE
BBIRORGE	Caulking Tube	1 x 300 g
BORNDISH	Pre-filled Dishes	1 x 15

ORNAWAY® DISH MAGNETS

Ornaaway® bird dish magnets offer the user ultimate versatility in the installation of Ornaaway® bird gel. The heavy-duty magnets allow the dishes to be securely attached to metallic structures and will remain in place, even in windy conditions.

CLIPS FOR GUTTERS

Clips for Gutters fit securely onto the base of P14, P20, P32 and G20 Bird Spikes. The clips for Gutters allows the spike strips to be clipped onto the side of a wide variety of gutters, allowing free flow of water underneath. Two clips are required per strip. Clips for Lipped Gutters fit securely onto the base of P14, P20, P32 and G20 Bird Spikes. They allow the spike strips to be clipped onto the side of a variety of lipped gutters, including many international style gutters, allowing free flow of water underneath. Two clips are required per strip.

ORDER CODE	DESCRIPTION	PACK SIZE
BAVI162	Clips for Gutters	10
BAVI163	Clips for Lipped Gutters	10

CLIPS FOR WINDOWS & SOLAR PANELS

Clips for Windows fit securely onto the base of P20, P32 and G20 Bird Spikes. They allow the spike strips to be easily secured onto window frames using White adhesive or screws. These clips are extremely useful as they allow the spikes to protect the window sill without hindering the operation of the window. Two clips are required per strip.

Clips for Solar Panels fit both solar panels and roof ridges it is easily glued or screwed in to place. These clip securely into place and are compatible with P14 and P20, P32 & G20. Made from a UV stable polycarbonate material which is compatible with 90°, 105° and 125° roof tiles and compatible with both 45° and 37.5° solar panels.

ORDER CODE	DESCRIPTION	PACK SIZE
BAVI171	Clips for Windows	10
BAVI191	Clips for Solar Panels	10

AVISIL

For use with a caulking gun, this is a professional product that cannot be found in DIY shops. Avisil is vastly superior to ordinary clear DIY silicone due to it's ease of application, it stays permanently elastic after curing, Avisil has a high temperature resistance and UV resistance. A clear, high quality, neutral-curing silicone adhesive, Avisil is recommended for use where the surface is dry. It offers excellent adhesion on most building materials. One tube (310 ml) of Avisil can install up to 15 m of bird spikes.

PEST CONTROL CATALOGUE 2024/2025

If you are unsure which insecticides can be applied through the various applicators, then please see our A-Z charts within the Technical Section to the rear of the catalogue.

FOGGERS

APPLICATION equipment

PRODUCTS

FOGMASTER TRI-JET FOGGING MACHINE

The Commander Tri-Jet Fogger is suitable for chemical fogging (using pesticides, sanitisers etc.) and can also be used for humidifying.

With adjustable particle size and discharge rate, the Tri-Jet can mist up to 9 metres in any direction indoors or outdoors. Also ideal for deodorising smoke contaminated buildings, and the fine fog can be used to penetrate porous materials. Pest control, odour control, and disinfection or sanitising are just a few of the many uses for this product.

Aluminium housing, fuel and oil resistant vinyl tubing, and brass control valves and fittings round out this sturdy apparatus.

The Tri-Jet is CE approved and can be used with water and oil-based liquids.

Each

ORDER CODE: BTRIJETF

FOGMASTER JUNIOR

Fogmaster Jr. is a compact, general usage ULV fogger with a wide variety of applications, from removing unpleasant odours and moulds from indoor places to applying water & oil-based insecticides. As the manufacturer states, this fogger is for those jobs for which an industrial fogger is too large and a hand sprayer is too small. This fogger comes with a UK plug.

Each

ORDER CODE: BFOGJUNI

ULV APPLICATOR

A simple robust Ultra low volume applicator for use to apply Grain-Tect ULV and K-Obiol ULV - 6 formulations to grain. Kit includes pump, nozzle, air and liquid transfer tubing pressure regulator.

SPRAYERS

GLORIA 510T

The Gloria 10 litre stainless steel sprayer. Has the same specification as the 505T but a larger 10 litre capacity.

10 Litre

ORDER CODE: BSPGL142

GLORIA TYP 89

Gloria special pressure sprayer Typ 89 has got a capacity of one litre and a maximum operating pressure of 3 bar. Its highlight is the adjustable nozzle with swivelling head that enables spraying into corners that are difficult to access.

1 Litre

ORDER CODE: BSPGLPL1

GLORIA 405T

Gloria 405 T Profiline has got a pressure tank made of steel with a high-quality internal plastic coating and a capacity of 5 litres that stands out due to its high durability. Contact between aggressive media and steel tank is avoided thanks to the coating, and cleaning is considerably easier. The high-performance sprayer works with an operating pressure of 6 bar and impresses with its equipment and a wide range of use.

5 Litre

A GUIDE TO THE BARRETTINE RANGE OF PERSONAL PROTECTIVE EQUIPMENT COSHH AND PPE REGULATIONS

The COSHH Regulations 2002, as amended in 2003 and 2004 are a key part of health and safety at work. The regulations place a legal requirement on all employers and operators including self-employed people to undertake an assessment of the risks created by exposure to any substances hazardous to health. The risk assessment shall include consideration of the hazardous properties of the substance, manufacturers information contained in any material safety data sheet, the level and type of duration of exposure, working circumstances and other factors relating to exposure limits, control measures etc.

The COSHH amendment Regulation 2004 which came into force on 1st April 2005. It introduced a new framework of adequate control of exposure by specifying principles of good practice (Schedule 2A) and by replacing occupational exposure standards (OES's) and Maximum Exposure levels (MEL's) with workplace exposure limits (WEL's).

The Personal Protective Equipment Regulations 1992 require that where PPE is issued it must be suitable for the task for which it is required, and it must take into account the demands it places on the worker. It must be maintained in good condition and stored when not in use in a clean cabinet or container.

What does this mean to you?

The provisions make the duty holders focus on applying principles of good practice to controlling exposure rather than compliance with any OEL. (Schedule 2A)

This has the effect of bringing into the definition of adequate control all substances within the scope of the COSHH regulations, irrespective of whether they have an OEL, and all routes of exposure i.e. inhalation, absorption and ingestion and injection. It is now accepted that it is not possible to give a "Safe limit" as before because in practice a guarantee for health protection for all individuals, even if exposure is below a specified limit, is not scientifically secure.

The revised system of WEL's will be set by the advisory committee on toxic substances (ACTS). These are listed in a publication EH40-2005. There is a specific WEL values in Table 1 for all substances. The WEL value is a limit that must not be exceeded and there is a duty, similar to the previous regulations, to ensure adequate control and to reduce exposure as far as possible.

The amendments to COSHH should make it easier for enforcers and duty holders to determine whether exposures to substances are adequately controlled and proportionate to the risk.

As part of the Barrettine professional services, we have available qualified COSHH Consultants who are able, on a fee basis, to undertake COSHH Assessments and preparation of COSHH documentation for our customers, as well as being able to define the personal protective equipment required in the specific situations encountered by our customers. In addition we are happy for our staff to offer advice, at no charge, on the level of protection required in applying and using any of the products which we offer as part of our Technical Sales Service to our customers.

Schedule 2A

Principles of good practice for the control of exposure to substances hazardous to health.

The eight principles of good practice for the control of exposure to substances hazardous to health are set out in Schedule 2A of The Control of Substances Hazardous to Health Regulations 2002 (as amended). Approved Code of Practice and guidance .

The principles are reproduced below:

- (A) Design and operate processes and activities to minimise emission, release and spread of substances hazardous to health;
- (B) Take into account all relevant routes of exposure - inhalation, skin absorption and ingestion - when developing control measures;
- (C) Control exposure by measures that are proportionate to health risk;
- (D) Choose the most effective and reliable control options which minimise the escape and spread of substances hazardous to health;
- (E) Where adequate control of exposure cannot be achieved by other means, provide, in combination with other control measures, suitable personal protective equipment;
- (F) Check and review regularly all elements of control measures for their continuing effectiveness;
- (G) Inform and train all employees on the hazards and risks from the substances with which they work and the use of control measures developed to minimise the risk;
- (H) Ensure that the introduction of control measures does not increase the overall risk to health and safety. If employers apply the principles correctly, exposure should be below any relevant WEL. Control by personal protective equipment should only be used when other measures are not reasonably practicable. The list of WEL's applies to concentrations of hazardous substances breathed in by the worker and are used to determine the adequacy of control measures. There are several publications, which give advice and guidance on what is required under the COSHH Regulations.

Regulation 7 COSHH 2002. Fit Testing of Facepieces

The performance of RPE with a tight-fitting facepiece (filtering facepieces, half and full full-face masks) depend on a good contact between the wearer's skin and the face seal of the mask. A good face seal can only be achieved if the wearer is clean-shaven in the region of the seal and the facepiece is the correct size and shape to fit the wearer's face. Employers should ensure that the selected facepiece (tight and loose fitting types) is of the right size and can correctly fit each wearer. For a tight-fitting facepiece (filtering facepieces usually known as disposable masks, half and full face masks) the initial selection should include fit testing to ensure the wearer has the correct device. Barrettine can advise customers about this requirement.

WHY CHOOSE BARRETTINE AS YOUR PREFERRED SUPPLIER?

QUALITY PRODUCTS

As well as working directly with the key major Biocide Manufacturers, Barrettine manufacture and source a fantastic wide range of products, many of which are award-winning, helping you and your business to stay ahead.

Discretion is key. We're not your competitor!

Unlike some other distributors we are careful how and where product prices are displayed.

Our products are only sold to qualified Pest control Companies/ Technicians or recognised distributors with appropriate facilities.

TECHNICAL SUPPORT, PRODUCT STEWARDSHIP, REGULATORY & LEGISLATIVE UPDATES.

Professional products are only sold onto qualified/competent personnel that can demonstrate they have the required training and qualifications.

QUALIFIED STAFF

Barrettine at the heart of our industry, constantly update Customers with the ever-changing regulatory & legislative issues we must implement. A number of Barrettine staff represent the company and the industry within a number of independent bodies and organisations such as the BPCA, NPFA & CRRU.

TRAINING

Barrettine is a Lantra approved Training provider have put together a number of excellent, independent and recognised training courses to help support your business, your staff & colleagues. Contact the Sales office for further information.

FREE INSECT ID

From an independent industry-leading entomologist, quick and easy and free to our Customers.

BARRETTINE GROUP CORPORATE & SOCIAL RESPONSIBILITY

(Full policy document available on request)

We recognise that we must integrate our business values and operations to meet the expectations of our stakeholders. This includes our Customers, Employees, Investors, Suppliers, the Community and the Environment.

The Board of Directors supports this principle and the aim of our full policy is to translate this into guidelines, standards and actions that set a common approach for all employees within our Business.

PURPOSE & AIMS

The Barrettine Group Mission is:

- To enhance our expertise in our key Business activities; Chemical Formulations, Chemical Products, Chemical Handling, Biocides & Product Development.
- Give priority to Customer service and Flexibility
- Offer value for money, Sustainable Products & Services that meet the demands of our Customers and markets, whilst being acceptable to the Environment.
- Target and achieve the highest quality standards in all we do.
- Honesty & Integrity, Always Trustworthy

These core values continue to help us achieve our overall objective; A strong performing business respected by our Customers & Supply Partners, envied by our Competitors.

CODE OF BUSINESS ETHICS

We recognise that good CSR embraces all aspects of sustainable development and the way we affect people through our business operations. Therefore, our CSR applies to all of the operations of the Company and its subsidiaries and sets out the minimum standards expected from staff in their internal and external dealings with colleagues, customers, stakeholders and third parties.

Our full range of policies cover: Employees - Equality - Human Rights - Modern Slavery - Environment - Quality Control - Sustainability - Impact on society - Ethics & Ethical Trading.

ENVIRONMENT

ISO 14001 Standard.

(Full Environmental Policy available on request)

QUALITY MANAGEMENT SYSTEM

ISO 9001 Standard. (Full policy available on request)

SUSTAINABILITY - IMPACT ON SOCIETY - ETHICS AND ETHICAL TRADING

(Full policy document available on request).

- Our Sustainable policy will be maintained and it sets out the principles, policies and procedures on which sustainable business activity within Company will be based. The policy acts as a prompt to staff to consider sustainability as a factor in all key decisions;
- We take steps to understand how we can most effectively support the needs of the local and wider community and implement initiatives accordingly; A number of Charities are supported by both the Business as well as individual Employee fundraising events.

TOTAL SERVICE

- Barrettine strive to complete your order and deliver next day, we will always advise if there are any issues beforehand.
- A full competitive package. We will do our best to match, or beat any price on offer.

MORE THAN JUST A SUPPLIER.

A true partner to support your business, the right Chemistry!

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Imidacloprid 0.01%	Tropical Ants, Argentine Ants, Black Ants	Indoors and Outdoors	Indoors: 0.2-0.4g/m ² Outdoors: 0.2g/m ²	Apply using suitable bait gun/ applicator	Chemical resistant gloves	Knockdown and residual.

MoBe® ANT STATION

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Imidacloprid 0.01%	Tropical Ants, Argentine Ants, Black Ants	Indoors and Outdoors	One station /4 m ² along foraging trails	Station is supplied ready to use	Chemical resistant gloves	Knockdown and residual.

MoBe® ROACH GEL BAIT

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Imidacloprid 2.15%	German Cockroach and Oriental Cockroach	Indoors only	German Cockroach: 0.1 - 0.2g/m ² Oriental Cockroach: 0.2 - 0.3g/m ²	Apply using suitable bait gun/ applicator	Chemical resistant gloves	Knockdown and residual.

OA2KI CONCENTRATE & OA2KI READY-TO-USE

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Aqueous cellulose polymer	Ants, Bed bugs, Fleas, Flies and small insects.	Refer to product label.	Concentrate only: 1 part concentrate to 7.5 parts water - 500 ml of Concentrate makes 4.25 litres of ready-to-use product.	As a surface spray-use a knapsack / compression sprayer-apply as a medium spray - As a space spray-apply through a suitable ULV or fogging equipment that can dispense water-based products.	Wear face protection and gloves.	Knockdown.

OA2KI POWDER

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Diatomaceous Earth	Effective in desiccating areas where applied.	Domestic, Commercial, Public and Institutional premises, inc. Kitchens and Food preparation/manufacturing areas.	For public health pest-apply as required to cracks and crevices 10-30 g per m ² .	Apply using a suitable mechanical or electric dust applicator or via a puffer pack.	1/2 mask with goggles, chemical-resistant gloves and coveralls.	Extremely residual. If product is applied to dry, clean and undisturbed environments.

OA2KI AEROSOL - SD

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Silicon Dioxide	Bed bugs.	Domestic and Commercial - cracks and crevices.	Ready-to-use. Apply liberally.	Apply directly from aerosol hold 30 cm away from surface - One can covers 9 m ² .	1/2 mask with goggles, chemical-resistant gloves and coveralls.	Residual.

PERMOST UNI FLY SPRAY

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Permethrin 0.31 % (w/w) Tetramethrin 0.124 % (w/w)	Flies, Mosquitoes, Wasps, Ants, Cockroaches, Earwigs, Fleas, Bristletails, Beetles, Mites, Ticks and Fleas.	Hospitals (excl. occupied wards), Military barracks, Milk rooms, Avian housing and Refuse tips.	1 L of product sufficient to treat 1,000 m ³ .	Hand Sprayer or Fogger.	1/2 mask with goggles, chemical-resistant gloves and coveralls.	Knockdown.

PROTECTOR ONE SHOT

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Pyrethrin 0.2 % (w/w)	For the control of flying insects such as Flies, Mosquitoes, Ants, Cockroaches, Wasps, Earwigs, Silverfish (inc. other bristletails), Fleas, Beetles, Bed bugs, Moths, Booklice, Mites (inc. Dust mites).	Use in domestic & commercial situations, inc. kitchens, hospitals (not occupied wards), hotels, restaurants, public & municipal buildings & onboard ships, for use outdoors on patios, paths amenity areas, transit stations, refuse tips & wasp nests. In & around farm buildings.	Ready-to-use aerosol.	Ready-to-use aerosol.	Full face or 1/2 mask with goggles. chemical-resistant gloves and coveralls.	Knockdown.

VULCAN P5

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
Permethrin 0.05 % (w/w)	Fleas, Lice, Mites, Ticks, Cockroaches, Earwigs, Beetles (inc. larvae), Moths (inc. larvae), Bed bugs, Ants, Woodlice, Silverfish and Wasps.	In and Around buildings.	10-25 g per m ² .	Dusting applicator.	Full face mask or 1/2 mask with goggles, chemical-resistant gloves and coveralls.	Residual and knockdown.

XLARV

ACTIVE %	SPECIES EFFECTIVE AGAINST	AREA OF USE	DILUTION/DOSE RATES	APPLICATION TECHNIQUE	PPE REQUIRED	RESIDUAL OR KNOCKDOWN
A unique silicone based liquid for Mosquito, Larvae and Pupae control.	Can be used on all mosquito species: the film prevents pupae and larvae from attaching themselves at the surface while attempting to breathe, thereby causing them to drown.	For use on Open water bodies and Underground systems.	Refer to product label.	Refer to product label.	Refer to product label.	Refer to product label.

The Barrettine's pocket-size A6 Pest Technicians guide contains detailed information to assist in the daily routine of a Professional Pest Control Operator: A 'how to' guide covering topics of insect and rodent information and identification, equipment calibration, non-chemical insect control measures, pesticide application and product safety, dealing with waste: Triple rinsing as well as detailed information on LD₅₀.

ORDER CODE: BPIDBOOK

WATER VOLE PROTECTION

KNOW YOUR VOLE

Water voles are easily confused with rats. Rats are treated as pests but water voles are a legally protected species. How can pest control affect water voles? Controlling pests such as rats may lead to accidental destruction of water vole colonies. Damage occurs when water voles are mistaken for rats, or when control methods are used carelessly. Rats sometimes prey on young water voles so careful rat control can benefit water vole colonies.

WHAT THE LAW SAYS

Is it an offence to intentionally or recklessly damage, destroy or obstruct access to any structure or place that a water vole uses for shelter or protection. It is also an offence to disturb a water vole while it is using such a place. (Wildlife and Countryside Act 1981, Schedule 5, Section 9[4]). Blocking water vole burrows is illegal. Placing traps or bait boxes into or in the way of water vole burrows could lead to prosecution. Offences carry a maximum penalty of £5000. The court may also take any vehicle or other equipment used to commit the offence.

THREATS TO WATER VOLES

Water voles have suffered the most dramatic decline of any British mammal in the last century. There is now only one vole for every 20 that were alive in 1900. The main causes for this decline have been loss and damage to habitat, and predation by American mink. Any activity that poses the slightest threat to water voles must therefore be undertaken with extreme care.

THREATS TO WATER VOLES

If you are controlling pests near water, check for signs of water voles before starting. Your local Wildlife Trust may be able to provide information on water vole presence at the site. Both water voles and rats burrow into the banks of most types of waterway. Water voles are usually restricted to within several meters of the water's edge. Use the chart below to check for signs of water voles. If you find water voles and rats follow the advice in the leaflet. If in doubt, contact your local Wildlife Trust.

WATER VOLE (*Arvicola terrestris*)

SIZE & SHAPE	Water voles have rounded bodies and grow to 320 g, smaller than an adult male rat.
COLOUR	Water voles are generally mid-brown in colour with silky fur. Dark brown or black individuals may occur, especially in uplands.
SNOUT, EARS AND TAIL	Water voles have short blunt snouts. Their ears are almost hidden by fur. Their furry tail is two thirds of their body length.
BURROWS	Water voles have short blunt snouts. Their ears are almost hidden by fur. Their furry tail is two thirds of their body length.
PATHS	Usually one main track along water's edge, with some paths pushing up into vegetation higher up the bank. Paths are normally concealed in grass and stay near the water.
DROPPINGS	Between spring and autumn droppings are left in piles of 5-100 usually within 30 cm of water. In winter droppings are dispersed. Droppings are 5-10 mm long and rounded at both ends. They have a putty-like texture, with very fine plant material visible. Green, brown, purplish or black in colour. No strong odour.
FEEDING REMAINS	The diet of water voles is mainly vegetarian. Water voles leave small piles of chopped vegetation (approx. 10cm long and cut at 45 degree angle with grooved teeth-marks at ends) at feeding sites on banks.
ACTIVITY	Can be active during the day but more likely to be seen at dawn and dusk.
FOOTPRINTS	Not a reliable guide.

BROWN RAT (*Rattus norvegicus*)

SIZE & SHAPE	Rats are bigger than water voles. Adult males weigh up to 500 g.
COLOUR	Grey or brown with a paler underside.
SNOUT, EARS AND TAIL	8-10 cm diameter burrows may occur well away from the water's edge often with a heap of soil in a 'fan' shape outside the entrance.
BURROWS	A network of well trampled paths connecting all burrows. Paths may lead across open land away from the water.
PATHS	A network of well trampled paths connecting all burrows. Paths may lead across open land away from the water.
DROPPINGS	One or several left on paths or at the water's edge. Droppings are 12-15 mm long, flat at one end and pointed at the other. Slimy or very soft texture, occasionally granular. Light brown to black in colour. Unpleasant odour of urine or ammonia.
FEEDING REMAINS	Rats are opportunist feeders and will eat a variety of foods. Remains of meals such as broken snail shells are sometimes found on the riverbank.
ACTIVITY	Largely nocturnal.
FOOTPRINTS	Not a reliable guide.

TERMS & CONDITIONS

TERMS & CONDITIONS

1. All products are offered for sale subject to our standard conditions of sale. Full terms and conditions are available on request.
2. All prices quoted are exclusive of VAT and are subject to alteration without notice.
3. We would especially draw you attention to the following standard conditions:
Nett Cash Monthly to Approved Accounts. Carriage is paid on orders of £245 or more for standard next day delivery, unless otherwise specified.
For orders of a lesser value a small surcharge of £9.85 per invoice will be raised to meet cost of processing small orders. Carriage is charged at cost to deliveries off the mainland such as offshore islands.
4. Notification of non-delivery must be made in writing within seven days from the date of despatch of the goods or else claims cannot be entertained.
5. Barretine cannot take responsibility for any associated costs arising from delivery issues (such as late or failed delivery), or delivery of wrong items and neither Barretine, nor our courier company take any responsibility if the clients request we leave goods unsigned.
6. Returns Policy - Should you return the Goods in accordance with our Terms & Conditions stated above, we reserve the right to charge a "restocking fee" which will be an amount equivalent to 15% of the price payable by you in respect of the returned Goods.

Should you wish to return anything bought from us, we will be happy to refund or exchange a product provided it is in a fully resaleable condition however you will be responsible for the postage and any associated cost and risk of the return of the goods to us.

If you wish to return your order we must receive notification within 14 calendar days from receipt of your goods. If we find that the product has not been returned to us in a fully resaleable condition, we reserve the right to refuse a refund on the item.

SPECIAL CONDITIONS OF SALE

Poisons

These products are subject to the Poisons Rules and can only be supplied to authorised purchasers against a signed official order stating the purpose of which it is to be used.
Please note: These items cannot normally be supplied on a next day delivery.

Pesticides

All pesticides listed are approved by ministers under the Control of Pesticides Regulations 1986 and the Control of Pesticides Regulations (Northern Ireland) 1987. Control of Pesticides - superseded by the European Biocides Directive where appropriate.

The Health and Safety Executive (HSE) in the United Kingdom is responsible for administering the Control of Pesticides Regulations (COPR) regulatory scheme in relation to non-agricultural pesticides and is also responsible for regulating biocides in the UK. The Control of Pesticides Regulations 1986 (COPR) (as amended 1997) with products controlled under COPR are gradually moving over to be regulated under the Biocidal Product Register (BPR), with COPR eventually becoming redundant. In addition to the COPR and the BPR, Article 95 of EU BPR (as amended) introduces an approved active substance supplier list. Article 95 of EU BPR applies to all products that are approved under the Control of Pesticides Regulations (COPR). Article 95 (2) of EU BPR (as amended) states "As of 1 September 2015, a biocidal product consisting of, containing or generating a relevant substance, included in the list referred to in paragraph 1, shall not be made available on the market unless either the substance supplier or the product supplier is included in the list referred to in paragraph 1 for the product-type(s) to which the product belongs."

Efficacy: Biocidal and non-biocidal products have varying rates of efficacy in the field and product labels should always be referred to in order to maximise efficacy.

DELIVERY OPTIONS

PLACE YOUR ORDER **BY 3:00 PM**
TO TAKE ADVANTAGE OF OUR NEXT-DAY DELIVERY SERVICE

EXPLORE OUR EXPEDITED DELIVERY OPTIONS

Enjoy the convenience of next-day delivery, before 9:30 am, noon and even Saturdays, available upon request. For more details, kindly contact our office.

RAPID ORDER PROCESSING

Place a confirmed order by telephone before 3:00 pm Monday – Thursday and 2pm Friday, and your consignment will be dispatched on the same working day. Delivery timescales may vary based on courier performance and chosen delivery options.

SERVICE COVERAGE

These services apply to the UK mainland (excluding Scotland) and are subject to product availability at the time of order. Feel free to collect your goods directly from our warehouse between 8:30 am and 4:00 pm every working day.

COST CONSIDERATIONS

For orders exceeding £245.00 (excluding VAT), our standard delivery service is free of charge. A £9.85 (excluding VAT) fee applies to UK mainland only on orders below this amount.

PAYMENT CONVENIENCE

Prefer paying via card? Order and pay online through our website, or simply call us with your Mastercard or Visa number, and your goods will be on their way.

PEST, ENVIRONMENTAL & AGRICULTURAL SOLUTIONS

WE DELIVER **WORLDWIDE**

OUR SERVICE*

Our Export department understands the requirements of our overseas customers and we offer a complete export service for our diverse range of products to global destinations.

Dependant on the goods and the destination, our export department manages the Free Sales Certification as well as Certificates of Origin, hazardous packing and dangerous goods notices. The goods can be couriered direct, via freight forwarders or as consolidated freight.
