Sorexa® D

Contains 0.05 g/kg (0.005% w/w) difenacoum

Sorexa D is a ready-to-use grain bait for the control of house mice (*Mus musculus*).

To be used only by professional users holding certification demonstrating compliance with UK rodenticide stewardship regime requirements

The ultimate canary seed bait for mouse control

Canary Seed Bait

- Especially valuable where mice are proving hard to control with standard grain baits
- High quality canary seed bait for consistent control
- Exceptionally palatable to mice
- Thorough rodenticide impregnation

10 kg

Sorexa® D
Contains 0.05 g/kg (0.005% w/w) difenacoum
Sorexa D is a ready-to-use grain bait for the control of house mice (Mus musculus).
Sorexa D is for indoor use only.
For professional users with demonstrated competence.
When this product is supplied to a user for the control of rodents, it shall only be supplied to a professional user holding certification demonstrating compliance with UK rodenticide stewardship regime requirements.
Read the label before use. Using this product in a manner that is inconsistent with the label may be an offence. Refer to the CRRU UK Code of Best Practice (or equivalent) for guidance.
This product contains a bittering agent and a dye.

Danger:
May damage the unborn child. May cause damage to organs (blood) through prolonged or repeated exposure.
Observe special instructions before use. Do not handle until all safety precautions have been read and understood.
Wear protective gloves.
If exposed or concerned: Get medical advice/attention.
Store locked up.
Dispose of containers/container in accordance with national regulations.

To avoid risks to human health and the environment, comply with the instructions for use.

Application Method
Place Sorexa D baits throughout the infested area using tamper-resistant bait stations or covering and protected bait points.

Application Rate:

<table>
<thead>
<tr>
<th>Species</th>
<th>Situation</th>
<th>Application rate for each bait point</th>
<th>Recommended frequency of revisiting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mice</td>
<td>indoors.</td>
<td>Up to 30 g of bait placed 1-2 meters apart</td>
<td>Frequently over first 10-days and regularly as consumption continues.</td>
</tr>
</tbody>
</table>

Instructions for Use
Read and follow the product information as well as any information accompanying the product or provided at the point of sale before using it.

Carry out a pre-baiting survey of the infested area and an on-site assessment in order to identify the rodent species, their places of activity and determine the likely cause and the extent of the infestation.

Remove food which is readily attainable for rodents (e.g. spilled grain or food waste). Apart from this, do not clean up the infested area just before the treatment, as this only disturbs the rodent population and makes bait acceptance more difficult to achieve. The product should be placed in the immediate vicinity of places where rodent activity has previously occurred (e.g. rodent runs, nesting sites, holes, etc.).

Where possible, bait stations must be fixed to the ground or other structures. Bait stations must be clearly labelled to show they contain rodenticides and that they must be replaced or opened. Bait stations must be labelled with the following information: “do not move or open”; “contains a rodenticide”; “product name or authorisation number” and “in case of accident, call a poison centre”.

Hazardous to wildlife.

Dispose of dead rodents in accordance with local requirements.
In the UK poisoned rodents may be disposed of by the waste producer at an incinerator or landfill permitted to accept that type of waste, or collected by a registered waste carrier and taken for disposal at a suitably permitted site. For further information on disposal contact the Environment Agency (http://www.environment-agency.gov.uk) or SEPA (http://www.sepa.org.uk).

Rodents can be disease carriers. Do not touch dead rodents with bare hands, use gloves or use tools such as tongs when disposing them.

Resistance management
Do not use in areas where resistance to the active substance is suspected.

Products shall not be used beyond 35 days without an evaluation of the state of the infestation and of the efficacy of the treatment.
Do not rotate the use of different anticoagulants with compatible or weaker potency for resistance management purposes. For rotational use, consider using a non-anticoagulant rodenticide, if available, or a more potent anticoagulant.

Storage
Store in a dry, cool and well ventilated place away from products with an odour.
Keep the container closed and away from direct sunlight.
Store in places prevented from the access of children, birds, pets and farm animals. Shelf life: 2 years.

Disposal
At the end of the treatment, dispose of uneaten bait and the packaging in accordance with local requirements.
Use of gloves is recommended.
For information on disposal contact the Environment Agency (http://www.environment-agency.gov.uk) or SEPA (http://www.sepa.org.uk).

First Aid
This product contains an anticoagulant substance. If ingested, symptoms, which may be delayed, may include nosebleed and bleeding gums. In severe cases, there may be bruising and blood present in the faeces or urine.
Antidote: Vitamin K1 administered by medical/veterinary personnel only.

In case of:
- Dermal exposure, wash skin with water and then with water and soap.
- Eye exposure, rinse eyes with eyes-rinse liquid or water, keep eyes lids open at least 10 minutes.
- Oral exposure, rinse mouth carefully with water. Never give anything by mouth to an unconscious person. Do not provoke vomiting. If swallowed, seek medical advice immediately and show the product’s container or label.

UK medical professionals should contact the National Poisons Information Service (www.npis.org) for further advice.

Contact a veterinary surgeon in case of ingestion by a pet.
