Flymax[®] SUPER G3

Flymax[®] Super G3 is a novel polymer formulation combined in a water-based delivery system that gives rapid knockdown of flies, ants, fleas, bed bugs and small insects.

Due to its physical mode of action, Flymax[®] Super G3 is effective against insect strains that are resistant to organophosphate and pyrethroid insecticides.

Flymax[®] Super G3 may be applied in domestic, commercial, public and institutional premises, including kitchens and food preparation/ manufacturing areas, in hospitals (including corridors and occupied wards), on-board ships and in shipping containers, in animal livestock houses, on refuse tips as well as in the home or garden.

Use in Public Health / Refuse Tips: Effective in controlling most types of common flying & crawling insects, including flies, ants, fleas, mosquitoes, moths and bed bugs etc.

Use in Agricultural Situations: Effective in controlling stored product insects including grain pests, litter beetle, flying insects such as: house fly, cluster fly, mosquitoes, etc. (can be applied as surface spray while livestock is present but avoid direct contact with livestock/animals).

DIRECTIONS FOR USE: Ready to use formulation can be applied as a coarse spray or Ultra Low Volume (ULV) space spray or cold fog. Flymax[®] Super G3 can be used both indoors and outdoors.

Flies

Can be used as a coarse spray or ULV space spray. Flies will quickly be knocked down at the time of treatment. Some larger fly species may need a second spray to completely immobilise them.

Ants

Spray directly onto ants and where trailing ants are visible. Flies will quickly be knocked down at the time of treatment.

Fleas

Flymax[®] Super G3 can be sprayed directly onto pet bedding, do not apply directly onto animals.

Bed bugs

Product can be applied directly to the insects and to cracks and crevices where insects may hide.

APPLICATION

Crawling Insects: Apply as a fine to medium spray at low pressure, directly onto insects. For fairly clean non-absorbent surfaces, apply two litres of diluted product per 100 m² and apply to run-off. For dirtier and heavier infestations use the increased rate of 5 litres of diluted product per 100 m².

Flying Insects: Apply with a suitable ULV aerosol generator or mist fogging machine. Apply approximately 1 litre of diluted product per 1500 m². Flies will quickly be knocked down at the time of treatment. Some larger fly species may need a second spray to completely immobilise them.

Avoid spraying near highly polished wax surfaces. Do not spray directly onto animals, plants or foodstuff. Product may mark or darken absorbent surfaces. These marks should disappear within a few days but if in doubt, spray a small test area first. There is no residual action from this product.

Flymax[®] Super G3 is a non-biocidal product due to its physical mode of action and is exempt from EU Reg. 528/2012.

Health & Safety Information

- Keep out of reach of children.
- Review the SDS before use.
