

MoBe[®] Moat

MoBe[®] Moat is a thin paper-backed glue board that comes in an 18 metre roll. It is easy to carry, simple to deploy, and can monitor and control crawling insects or mice quickly and easily. MoBe Moat can be cut to fit almost any situation allowing great flexibility and a vast number of uses:

- Keep mice or insects from crawling away and infesting other areas.
- Monitor any area and quickly see where the trouble spots are.
- Protect sensitive product. Encircle pallets or shelves, and then see what tries to enter, or exit.
- Use as a temporary barrier to prevent migration of grain pests.
- Slide into tight spots, like under cabinets, to catch insects or use as an overnight 'blitz' treatment against pests such as cockroaches, crickets etc.
- Attach food or pheromone lures to attract target pests.

IDEAL FOR USE

- In Commercial kitchens.
- Quarantine of areas or goods.
- To protect pallets of finished product.
- To act as a monitor or control goods in transit.
- To help prevent the introduction of 'alien' species to sensitive environments.
- In ports or shipping.
- To help protect and monitor grain and other stored commodities.

MoBe Moat can be cut to fit any situation

PRODUCT DETAILS

- 18m of special siliconised paper.
- 12 inches wide, to try to stop anything getting across.
- Trademarked product.
- Special 'non-dry' glue technology stays sticky for long periods.
- Chemical-free protection for food storage, production & handling areas.
- Cuts easily with scissors or a utility knife.
- Black and yellow hazard warnings alert operators of its placement.
- Easy to tape down for greater security.

Attach food or pheromone lures to attract target pests.

Instructions for use

The MoBe Moat is a professional-use product designed to work as part of an integrated strategy within pest control. The product is designed primarily to act as a barrier, preventing cross contamination and spread of pests from a known or suspected area of infestation into non-infested areas. Guidelines for its effective use are shown below.

Try to ensure that the area where the moat is to be laid is as clean as possible.

Unravel the roll to the desired length. Please note that when you first open the roll, there is a section of unglued material designed to ensure the glued roll remains clean.

The roll is designed so that you can place it around single or multi-pallets or any commodity or infested equipment - simply overlay the corner ends.

In order to ensure that the moat stays in place, simply overlay the corner ends.

If the product is being used on uneven floors against insects, you may wish to tape the edges down to ensure that insects cannot pass underneath.

Additional pheromone lures can be placed along the surface if monitoring against beetle or moth (but do not place food or other attractants).

If using to quarantine areas of known mice infestation check at least daily and always use in accordance with national guidelines (such as the Pest Management Alliance code of practice).

Dispose of any mice humanely.

Do not use in areas where non-target animals could become trapped in the glue.

Packaging & Export Specification

- 300mm - Roll width
- 400mm - Core length
- 24mm - Outer Core Tube
- 19mm - Inner Core Tube
- Weight 956g - per roll

OUTER BOX x 15 rolls
42cm x 33cm x 34cm

15kg

Trap substrate: is a paper that is laminated with polyethylene.

Hot melt pressure sensitive adhesive: is a blend of synthetic rubbers with tackifiers, micro crystalline waxes and oils. The product contains negligible VOC levels and is non-hazardous and non-toxic.

The paper and laminate has no chemical hazards associated. A full MSDS is available on request.
