OA2KI® POWDER

Oa2ki Powder® is effective in desiccating areas where the powder is applied. Diatomaceous earth is a naturally occurring, soft sedimentary rock that is milled into a fine white powder. The rock consists of fossilised remains of diatoms, a type of hard-shelled algae.

	POWDER 400 g, 4 kg & 25 kg	APPLICATION
	A pack size for all applications. Oa2ki® Powder 400 g puffer pack allows direct application from the bottle whilst the larger sizes are suitable for industrial uses. Oa2ki® powder is applied thoroughly in cracks, crevices and insect runs. The powder is left undisturbed and can be reapplied when necessary.	

OA2KI® LIQUID CONCENTRATE & TRIGGER SPRAY (READY TO USE)

Oa2ki® liquid works purely by physical means, it consists of a cellulose polymer and a solvent which is effective against a wide range of small insects. An ideal choice in sensitive sites where pesticides may not be suitable such as kitchens and hospitals.

	LIQUID CONCENTRATE 500 ml (Professional)	APPLICATION
	Oa2ki® organic insect control is also available in this 500 ml professional concentrated liquid form. Oa2ki® concentrate can be applied to mattresses due to it's pesticide free formulation and mode of action. It can be applied with a 5 litre compression sprayer and a 500 ml bottle will make 4 litres of solution.	

	TRIGGER SPRAY 500 ml (Ready to use)	APPLICATION
	Oa2ki® Ready To Use Trigger Spray is the ideal product to use or leave behind with your customer as back up. For example if you have just treated for ants or fleas, you can leave this behind so the customer can kill off any stragglers that are still appearing, thus reducing call backs.
