Technical Data Sheet

## MoBe® Moat

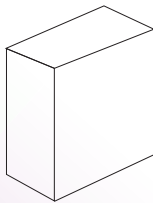

### DESCRIPTION

MoBe Moat is an insect trap and quarantine tool developed with industrial and biosecurity uses in mind. The 18m siliconised paper roll is coated in a non-drying adhesive on the interior side spanning 20.5cm – preventing crawling insects from being able to cross the barrier. MoBe Moat is ideally suited for quarantining goods suspected to be infested or of high risk origin as a quality and biosecurity measure or for creating barriers between rooms/industrial areas when there is a concern of pest migration.

### SPECIFICATION

**Active:** N/A      **Shelf Life:** Three Years from Date of Manufacture      **Colour:** Yellow/Black  
**Commodity Code:** 48114900      **UN Number:** N/A      **Shipping Incoterms:** Ex Works-Bristol

<b>17kg</b>	<b>Pallet: 420kg</b>

#### DIRECTIONS FOR USE

The barrier roll should be cut to the desired length and installed along the perimeter of the area. This can be as an unbroken line around pallets, bulk bags, etc. or it can be installed around door frames and along floors to prevent pests leaving/entering a specific area. For maximum effect pheromone and food lures can be incorporated, placed at regular intervals of 2 – 5m along the glued surface – however this is a monitoring practice and is unlikely to provide complete control of an infestation. Care should be taken to ensure that MoBe Moat is placed only in areas where the likelihood of pets or other non-target mammals becoming trapped is deemed to be highly unlikely – in the event that a pet or other animal does become stuck to the glue – consult a veterinarian immediately and apply Romax Glue Solvent to release the animal from the surface. MoBe Moat is intended for the control of INSECTS ONLY and should not be used for the control of rodents.

#### SAFETY INFORMATION

To our knowledge, this product does not present any particular risk, provided it is handled in accordance with good occupational hygiene and safety practice.
