

MoBe Combo MK. 2 Trap

Description

The MoBe Combo trap has been specially designed to monitor the two most important insect pests of tobacco: the Tobacco Beetle, *Lasioderma serricorne* and the Tobacco Moth, *Ephestia elutella*. Each trap is supplied with a pheromone lure which should be positioned on the centre of the sticky base. MoBe Combo traps are the ideal monitoring solution for leaf warehouses, freight containers and cigarette production facilities.

Specification

Size:	159 x 217 mm
Thickness:	0.45 mm
Glue Weight:	100 gsm
Pheromone Loading:	4mg

Colour

Yellow

Instructions for Use

1. Remove trap from box and carefully peel off the protective paper to expose the sticky glue surface. Open the foil packet and locate the pheromone lure. Place this on the centre of the sticky glue base.
2. On each side of the glue base carefully fold along the two crease lines (as indicated by the red arrows below). Bend the sides together to form a roof and push the tab through the slot to lock the roof in position.
3. Position the trap in a convenient location, preferably at a height of 1.5 – 2m from the floor. Use one trap per freight container. For storage facilities, warehouses etc, we recommend using an array of traps in a square grid pattern, positioned 10 metres apart.

Traps should be regularly checked to determine if the pest is present. Replace traps after 4 – 6 weeks.

Packaging

Packaged in boxes of 20 traps. Ten boxes are packed per 3.5 Kg carton (200 traps).
